Discover
the potential

Shipbuilding in Turkey is a deep-rooted tradition dating back centuries ago. In 1390, the first shipyard was established in Gallipoli during Ottoman Empire period. Golden Horn Shipyard founded during the reign of Mehmet the Conqueror was one of the largest shipyards in the world during said period. With the Republic Period, the shipyard industry has even become more important. During the early period of Republic, shipyard industry was mainly based in Bosphorus and Golden Horn, which then relocated to Tuzla town in 1969.

In Turkey, there is a total of 103 shipyards, consisting of 78 active and 25 under construction, which builds ships and yachts as well as provides overhaul and maintenance service for the benefit of private industry. In terms of regions, the number of shipyard zones are distributed across our country as 28 in Istanbul Tuzla Shipyards Zone, 26 in Yalova city, 9 in Zonguldak city, 5 in Kocaeli city/Bay, 2 in Çanakkale city, 1 in Kastamonu city, 3 in Trabzon and one in each of Adana, Sakarya and Hatay cities. In addition, there are many businesses with a coastal strip shorter than 50 meter, so-called Craft Manufacturers, providing shipbuilding and overhaul and repair services in various cities notably of Tuzla Shipyards Zone.

Turkish shipyards build ships and tonnages in many types and kinds. The main types of ships include chemical tankers, fishing boat, container vessel, bulk carrier, yacht, mega yacht, tug boat, sailboat, general cargo ship, petrol tanker, fast response boat, Ice Class passenger ships for arctic cruise, coast guard boats, military ships, speed boat, multi-purpose tanker, dry cargo vessel, cement vessel and barge. In Turkish shipyards, ships are built to the international standards and under the supervision of recognized audit organizations.

Turkey's fast growing shipbuilding industry has been becoming a significant center of gravity for special-purpose tailor-made ship segment. The leading shipyards of Turkey has made significant progress with respect to the quality of shipbuilding and significant investments have currently been in place in order to increase capacity of the facilities. Furthermore, some of the large shipyards has initiated the process for enlarging their facilities to accommodate building ships up to 45,000 DWT. Turkish shipbuilding industry is also one of the world-leading countries in the building of mega yacht (a yacht with a length longer than 25m). In addition to the chemical tanker, mega yacht and sailboat orders, industry receives many orders for building petrol tankers, ferry boat, fishing boats and tug boats. Turkey has demonstrated a steady development in building of Super yacht (24m and above) and achieved third place in the world in terms of number and length of Super Yacht delivered as per 2010 data.

Among the top countries which Turkish shipyards make delivery of new ships include Northern European Countries, mainly, Norway. In the recent years, almost half of the export of Turkey in the industry are delivered to Northern European Countries, and industrial collaboration between Turkey and Norway has been solidifying every each year. In the last 5 years, Turkey enjoys the position of being the top country from which Norway imports fishing boat.

This almanac in your hand provides examples of the ships which have been built by Turkish shipyards for Norway and marine equipment which has been exported in the recent period. As Board of Directors of Turkish Ship Yacht and Marine Services Exporters' Association, we wish that deep-rooted collaboration between two countries will grow up whilst carrying it forward each passing year.

CEM SEVEN
Chairman
Turkish Ship Yacht and Marine
Services Exporters' Association

OCEANIC

TERSAN SHIPYARD
